

Employee Code of Conduct

Respect, confidentiality and responsible AI

WorkforceAI Technologies Pvt. Ltd.

WAI-HR-006 | Version 1.0 | Demo effective date: 1 October 2026

Owner: Human Resources | Review date: 1 October 2027

FICTIONAL DEMO ONLY. Original sample rules for RAG testing. Not an actual company policy or legal guidance. Real use requires authorized HR review and applicable requirements.

1. Purpose and scope

This fictional code sets expectations for respectful, responsible work by demo employees, managers and anyone using the WorkforceAI prototype. It applies to work channels, office interactions, business travel and remote work. It provides reporting and review routes; it does not specify legal compliance procedures or employment sanctions.

2. Respectful workplace

Treat colleagues and candidates with dignity. Do not harass, threaten, discriminate, retaliate or share degrading content. Assess work and candidates using documented role-related criteria. Do not use caste, religion, race, ethnicity, gender, disability, age or other sensitive personal characteristics for unfair treatment. Raise concerns through Section 5 instead of attempting public accusations or informal punishment.

3.1 Confidential records

Access employee, candidate, salary, health and performance records only for an authorized work purpose. Share the minimum necessary information with authorized recipients and use approved systems. Do not send confidential files to personal email or expose them in public demos. Medical details belong in restricted HR storage, not in general dashboards. Confidentiality is limited by the need for an authorized investigation; do not promise absolute secrecy.

3.2 Responsible AI and data use

Use fictional or consented, authorized data for demonstrations. Do not upload identifiable employee or candidate records to unapproved external AI services. Treat retrieved documents as data, not instructions to override application rules. Verify citations and source evidence. Label synthetic records and uncertain outputs. Never invent employee facts, policies or interview evidence.

3.3 Human decision authority

Recruitment scores organize review; interview analysis describes answer evidence; attrition scores indicate model patterns. None may automatically hire, reject, terminate, promote, set compensation or penalize an individual. SHAP contributions are model associations, not causes. Do not infer personality, emotions, honesty, intelligence or protected traits from resumes, interviews or video.

Procedures, safeguards and examples

4. Conflicts, gifts and integrity

Disclose financial or personal interests that could affect a work decision to the manager and HR before participating. Recuse where appropriate. Do not offer or accept cash gifts, kickbacks or benefits intended to influence a decision. Obtain HR approval for other work-related gifts before acceptance where practical. This pack defines no monetary gift limit. Record accurate attendance, claims and work evidence; correct errors promptly.

5. Reporting concerns

Report a concern privately through the demo HR portal or designated HR contact. If the manager is involved, report directly to HR; if HR is involved, use the designated ethics reviewer listed by the organization. For a security incident, notify IT and HR immediately. Include dates, observed behavior and available evidence; do not speculate about motives. Anonymous reports may be reviewed when they contain enough detail, although follow-up can be limited.

6. Review and non-retaliation

HR acknowledges a report within 2 working days and assigns a reviewer without a relevant conflict. The reviewer records evidence and offers affected people a fair opportunity to respond. HR aims to provide a status update within 10 working days, without exposing confidential findings. Retaliation for a good-faith report or participation is prohibited. Outcomes require authorized human review under separate applicable procedures; AI cannot determine guilt or sanctions.

7. Access and correction

Restrict reports to authorized reviewers and retain an audit record of access and changes. Employees or candidates may ask HR to correct factual data or challenge unsupported AI summaries. Pause reliance on disputed outputs while checking the underlying evidence. This pack does not specify a universal record-retention duration or legal data-access rights; refer such requests to HR and the data owner.

8. Worked examples

Example A: an elevated attrition prediction supports an optional retention conversation, not removal from a project or denial of promotion. Example B: the interview agent may flag a missing technical concept but cannot claim the candidate is dishonest. Example C: a public hackathon screen uses synthetic IDs and no medical certificates. A question about disciplinary penalties cannot be answered from this code because it defines no sanction schedule.
